- Remarks: (1) Unless otherwise indicated, the test temperature is 23 °C, the on-off ratio is 0.6s: 5.4s. During the test, the coil is not connected with surge suppression device. Please note that if the coil parallel diode is used, the release time of the contactor will be greatly prolonged and the service life will be reduced.
 - (2) The ambient temperature is 85 °C, and the cross-sectional area of the conductor is ≥ 14 mm². For detailed current loading conditions, please refer to the attached figure "tolerance curve".

Remark: Rated electrical life number is based on resistive load. Test under switch on/off. Switch on for 0.6s and off for 5.4s.,

Note: The above data is measured under the conditions of ambient temperature 85°C and the sectional area of conductor wire ≥14mm². The data is for reference only, do not use it to select fuse directly.

Precautions for use

1. To prevent looseness, please use gasket when installing contactor. Please install the contactor and load outlet in the way specified in the table below, and control the torque within the required range. In case of exceeding the range, the contactor may be damaged.

I	Contactor mounting part				
Installation	Torque requirement	Aperture of copper bar	Copper bar thickness	Installation	Torque requirement
M4 Screw (Internal thread type)	1.8N·m ~ 2.7N·m	Ø4.0~Ø4.5mm	3mm	M4 Screw	1.8N·m~2.7N·m

2. Please to avoid sticking grease and other foreign bodies on the leading-out piece, and use the connection wire of 14mm² or above, otherwise abnormal heating may be caused at the leading-out end.

3. It is suggested that the thickness of copper strip is 3mm, otherwise it will cause the problem of thread sliding teeth or loose installation.
