Performance graph

Remark: Rated electrical life number is based on resistive load. Test under switch on/off. Switch on for 0.6s and off for 5.4s.

Note: The above data is measured under the conditions of ambient temperature 85°C and the sectional area of conductor wire $\geq 100 \text{ mm}^2$. The data is for reference only, do not use it to select fuse directly.

Precautions for use

1. To prevent looseness, use a gasket when installing the contactor. Please use M5 screw at contactor installation. Screw locking torque should be controlled within 3N·m~4N·m; The screw locking torque at the installation of the leading end should be controlled at 9N·m~11N·m. In case of exceeding the range, it may cause damage.

Load the mounting part of the leading-out terminal				Contactor mounting part	
Installation	Torque requirement	Aperture of copper bar	Copper bar thickness	Installation	Torque requirement
M6 Screw	9N·m~11N·m	Ø6.0~Ø6.5mm	5mm	M5 Screw	3N·m~4N·m

2. Avoid sticking grease and other foreign bodies on the leading-out piece, and use the connection wire of 100mm² or above, otherwise abnormal heating may be caused at the leading-out end.
3. The product is built with an energy-saving board. The coil will switch after 0.2s is driven, but the repeated on/off operation < 0.2s will cause contactor failure.
4. The product with built-in circuit board cannot be driven by slow rising voltage. Please drive the coil by fast rising edge (step power supply mode), otherwise it won't move!
5. It is recommended that the thickness of copper strip be 3mm, otherwise it will cause the problem of thread sliding teeth or loose installation.
